Certificate of Completion

This document certifies that the person has successfully completed the following module:

DevOps

The Cloud DevOps module covered the intricacies of managing and delivering technical projects. The module delved into a wide range of skills including Git, Unix, Cloud technologies, Containerisation, Networking, Cybersecurity, and programming in Python and JavaScript. Emphasis was also placed on System Administration, Backend Development, Database Management, Continuous Integration and Deployment, Automation, Testing, and Financial Operations. Upon completion of the Cloud DevOps module, individuals are equipped with the capability to streamline the delivery of technical projects from development to production.
